

Applications Manager is a server and application performance monitoring solution from ManageEngine that provides deep-dive component monitoring for 80+ types of business applications spanning physical, virtual and cloud environments. In addition to infrastructure monitoring, Applications Manager also helps track the end user experience of business-critical web applications running on Java, .NET and Ruby on Rails platform. It helps IT admins to quickly detect, isolate and resolve performance issues, effectively plan capacity, and ensure optimal performance of your applications and servers.
